

Race, ethnicity, and language data is an important part of an individual’s health record. When your organization sends health data to VITL, VITL makes it available to other health care organizations to inform patient care and to the Vermont Department of Health for their public health initiatives. When the race, ethnicity, and language data you send is complete, standardized, and usable, it is a powerful tool in efforts to advance health equity.

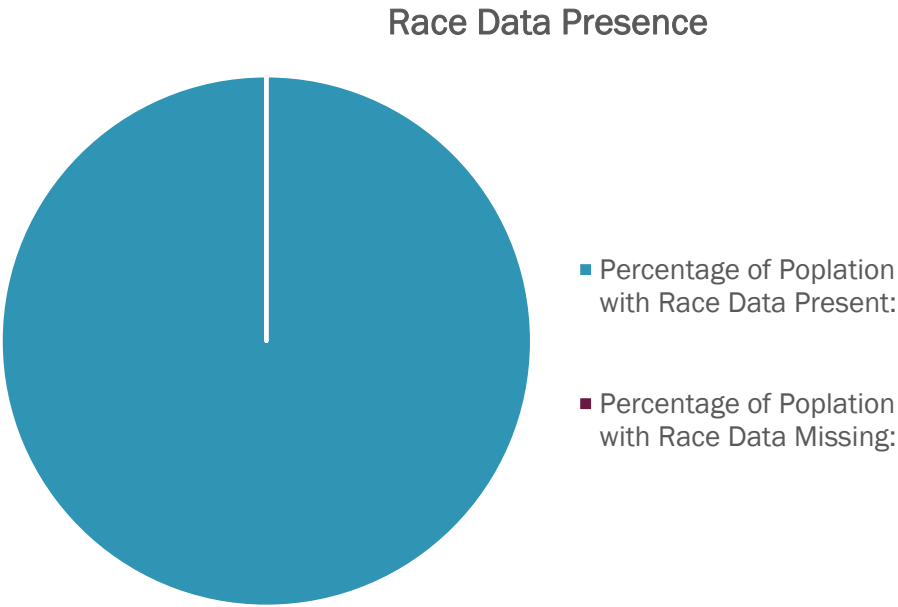

Race

This report provides information about the data provided to VITL from Acme Health Center from January 1, 2019 - December 31, 2023

Total Number of Individuals with Health Data in VITL:	12695
Percentage of Population with Race Data Present:	100%
Percentage of Population with Race Data Missing:	0%

Race Data Standardization and Usability Comment:
More than 95% of the individuals with data from your organization have a race value that is standardized or mapped to standard values. This data is usable, with little need for improvement.

Data types Acme Health Center sends to VITL:
Patient Demographics (ADT) Interface
Continuity of Care Document (CCD) Interface
Immunization (VXU) Interface

Race, ethnicity, and language data is an important part of an individual’s health record.
